

Photographs I-622-V, I-731-V, I-906-V, and I-905-V--THE NEW F-12 FARMALL.
The new low-price, all-purpose Farmall shown herewith weighs only a few hundred pounds more than a big draft horse but will do the work of four or more farm horses. Because of its lower price and cheaper operation, this interesting smaller Farmall will make a real appeal to a big, new group of farmers who work around 100 acres or less. It has sufficient power to pull a 16-inch single-bottom plow or a 10-inch two-bottom plow. As is the case with the two larger Farmalls, a variety of special Farmall equipment which helps so much to make the Farmall system of farming possible can be obtained for use with the new F-12.

NOTE: Photo. I-622-V shows the new F-12 Farmall operating a two-row cultivator; Photo I-731-V, a McCormick-Deering 10-foot tractor binder; Photo. I-906-V, a single-bottom 16-inch plow; and Photo. I-905-V, a single-row middle buster. This caption article goes with longer article "New One-Plow Farmall." A copy of it is attached to each of the photographs listed above.
